

# The Wrong Stuff

By: Liam Jennings, Isabelle  
Schmidt, and Tiger Teng

# Defining Stuff+

- Stuff+ evaluates a pitch based on its physical characteristics (aka the nastiness of a pitch)
- Features include:
  - Velocity
  - Vertical and horizontal movement
  - Extension
  - Spin Rate (RPM)
  - Spin Axis
  - Release Point
  - Velocity and Movement Differences from Primary Fastball

# Introduction

## Questions:

- What variables are most important for an effective pitch?
- How well does Stuff+ evaluate the effectiveness of a pitch?
- How has Stuff+ and the effectiveness of pitches changed over time?

# Data

## FanGraphs

Average Stuff+ in a given season for each of the pitcher's pitch types

## Baseball Savant

Aggregated pitch physical characteristics, release point, xwOBA, and Whiff% by pitcher, season, and pitch type

# Undervalued? Overvalued?

Andrew Heaney & Julian Merryweather 4-Seam Fastball

PLAYER NAME	SEASON	VELOCITY	EXTENSION	INDUCED VERTICAL BREAK	HORIZONTAL BREAK	SPIN	STUFF PLUS	WHIFF PCT	XWOBA
Andrew Heaney	2021	92.0	6.2	15.2	-15.3	2443	100.0	27.8	0.328
Andrew Heaney	2022	92.9	6.2	14.3	-14.8	2441	94.6	31.1	0.324
Andrew Heaney	2023	92.5	6.5	13.9	-15.9	2413	106.6	25.6	0.336
Andrew Heaney	2024	91.5	6.5	13.9	-15.7	2401	77.2	21.3	0.333
Julian Merryweather	2021	97.5	6.8	17.5	-7.7	2262	129.4	19.1	0.429
Julian Merryweather	2022	97.3	6.6	16.9	-6.5	2286	127.0	14.6	0.493
Julian Merryweather	2023	98.1	6.5	16.6	-6.3	2342	128.4	20.6	0.386
Julian Merryweather	2024	96.0	6.5	16.5	-5.7	2236	103.4	17.3	0.387

# Spin, Extension, and Velocity Are Essential in Stuff+

# Velocity Difference is Most Important

# Velocity Difference is Most Important

# Discussion

## Limitation:

- Aggregated Data
- Limited Pitch Types
- Temporal Scope

## Future Work:

- Look into Curveballs, Sinkers, and Changeups to see if there's any bias in these pitches Stuff+
- Create an open source Stuff+ model
